

# SCENE AUTHENTICATION<sup>®</sup>

SAFE | SECURE | RELIABLE

## PRODUCT OVERVIEW

Scene Authentication is a PSG Patented product which provides real-time authentication of a video signal from its inception (video scene) to its delivery (Viewing or storing) while simultaneously protects video signaling from spoofing, tampering and hijacking.

FEATURES	BENEFITS
U.S. Patent Aug 2016	Unique end-to-end protection
AES Encryption and RSA Signing	Advanced encryption and protection
Automated Pairing and Tuning Algorithm	Easy installation and configuration
Configurable Alerting	Differentiates a real attack from an interruption
Environmental Tuning	Reduces False Positives
Aware of time, spatial positioning	Verifies Video Veracity
Metadata Validation	Protects stored video with reversible audit
Integrated with PSG Talon™	ONVIF integration, FIPS-140-2
Available for OEM Integration	Technology can be integrated into camera/encoder firmware
USB Host One to Many Programming	Manage many devices from a single secure token
Industrially Designed	-40° to +70° C operation, made for uptime and reliability
